Heavy snow showers (night)	Heavy snow showers	Sleet showers	Light rain	Light rain	Heavy Rain
Precipitation probability					
60%	60%	60%	40%	30%	80%

Forecast for Wednesday 17 Nov 2021

Weather: Frequent showers will continue to spread east across all ranges, blown in on strong to gale force winds. Showers falling as snow to 500-600m initially, but slowly rising to munro level by midday. Showers tending to fade through evening ahead of thicker cloud and periods of rain and drizzle spreading northeast.

Chance of cloud free mountain/hill tops above 800m: 50%, falling 10% through evening.

Visibility: Showers will often bring cloud down to 500-700m so visibility will be very variable and fast changing above this level due to cloud and snowfall. Neighbouring slopes likely obscured by rain below this, but only for 15-30minutes at a time. Cloud becoming increasingly extensive above 400-500m through evening.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View

A few centimeters of fresh snow is likely to build up through morning, especially on west facing slopes.

Forecast for Thursday 18 Nov 2021

Weather: A return to mild conditions as thick cloud and moist air spreads in from the Atlantic. Persistent gales and extensive low cloud will be significant hazards. Any lying snow will quickly melt as rain sets in, this heaviest through the morning. Widely sodden ground likely in the west by the end of the day. Best shelter towards the Great Glen and Ben Wyvis.

Maximum wind: West 30-40mph gusting 50-60mph.

Chance of cloud free mountain/hill tops above 800m: Virtually no chance.

Visibility: Cloud will be extensive and persistent above 200-400m along the west coast, perhaps closer to 500m across the more sheltered east. Rain will turn lower slopes hazy. Little change expected through the day.

Temperature: **Glens:** Plus 10 Celsius.
At 800m: Around plus 6 Celsius.
Freezing level: Well above summits.
